SUMMARY

Senior Frontend Engineer with extensive experience designing and scaling modern web applications in health-care, fitness, and education. Led a team front end engineers to deliver a calendar-based booking system, EMR, CRM for the SendScript healthcare platform, improving scheduling efficiency and integrating OnlyOffice for document automation. Built interactive 3D-animation UI for the Culnity fitness platform, boosting user engagement and showcasing performance-driven UI engineering with React, Next.js, and Theatre.js. Seeking to apply deep React/Next.js expertise and leadership skills to drive high-impact frontend solutions and accelerate product growth.

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer

Feb 2025 – Present

DaivTech Pvt Ltd

Leadership & Ownership

- Lead a frontend team engineers, coordinate sprint planning and delivery using Agile ceremonies and Git for version control, achieving a 95% on-time sprint completion rate
- Establish code-quality standards and PR workflows with Prettier and ESLint, and design a scalable React architecture using code splitting, reducing bundle size by 20% and improving load times
- Mentor developers on performance optimization with React Query caching and animation best practices, resulting in a 30% reduction in page-render time

System Design & Collaboration

- Collaborate with product, backend, and design teams to deliver modular frontend platforms built with React.js and Next.js, ensuring requirement alignment and releasing updates every two weeks
- Drive architectural decisions for modular, high-performance frontend systems, implementing code splitting and lazy loading, which raised the Lighthouse performance score from 78 to 92

Key Project Contributions

SendScript (Healthcare Platform)

- Built a calendar-based booking system with a Google Calendar-like UI using React.js, code splitting, and animations, enabling users to schedule appointments more intuitively and reducing booking errors
- Developed a real-time consultation scheduling system with React Query for data fetching, allowing clinicians to see up-to-date availability instantly and increasing scheduling efficiency
- Integrated OnlyOffice into the platform for document automation and workflow management using REST APIs and React components, which streamlined contract generation and cut document processing time
- Designed reusable UI components and a scalable state-management architecture with React Context and code splitting, reducing code duplication and accelerating development of new features

Culnity (Fitness Platform)

- Developed an interactive UI with 3D animations using Theatre.js, which made the onboarding experience more engaging and increased time-on-page
- Built a gym discovery and booking system with React Query and modular components, allowing users to filter gyms quickly and complete bookings with fewer clicks
- Improved user engagement by adding animation-driven UX patterns, which encouraged repeat visits and higher interaction rates

Performance & Engineering Impact

- Implemented code splitting, lazy loading, and rendering optimizations with Webpack and React.lazy, reducing bundle size and speeding up initial page load
- Standardized frontend practices using React.js, Code Splitting, Prettier, and Git workflows, which improved code consistency across the team and reduced onboarding time

Software Engineer

Iamneo.ai Private Limited

May 2022 – Jan 2025

- Migrated Angular 12 applications to Angular 13, updating dependencies and refactoring code with TypeScript, which improved compatibility with newer libraries and reduced technical debt
- Built dynamic forms using Angular Form for schema validation, implementing complex conditional logic that streamlined data entry and decreased form errors
- Developed responsive UI components with Tailwind CSS and integrated them into a design system based on PrimeNg, delivering a consistent look across devices and improving user satisfaction
- Reduced API response time from 20s to 3s (85% improvement)
- Contributed to the Neo Exam and Neo Hire platforms by implementing new features with Nodejs, Express and Angular, enhancing platform functionality and supporting increased user adoption

ASP.NET Developer

Ebiz Global Corp

Oct 2021 – Apr 2022

- Developed 20+ web applications with ASP.NET C and jQuery, applying component architecture and Modern CSS to create responsive interfaces, which improved user satisfaction and accelerated feature delivery
- Managed SQL Server databases, writing optimized queries and implementing indexing strategies that reduced query response time and boosted overall application performance

TECHNICAL EXPERTISE

Frontend: React.js, Next.js, Angular, TypeScript, JavaScript, HTML5, CSS3, SCSS, Tailwind CSS

Architecture: Component Architecture, Code Splitting, Lazy Loading, Performance Optimization

State Management: Zustand, React Query, REST APIs

UI/UX: Responsive Design, Mobile-First Design, Design Systems, Animations

Libraries: Ant Design, React Hook Form, Zod, Highcharts, Theatre.js, PrimeNg

Real-Time: WebSockets, Socket.IO

Integrations: AWS S3, Stripe, Jitsi, OnlyOffice

Backend: Node.js, MySQL, NestJS

Tools: Git, Docker, ESLint, Prettier, Husky

AI & CURRENT LEARNING

- Implementing Generative AI in frontend applications
- Exploring AI-powered UI and workflow automation
- Hands-on with Claude, Ollama, Hugging Face, OpenClaw

LEADERSHIP & FUTURE VISION

- Growing as a Frontend Architect / Engineering Leader
- Mentoring developers and improving team productivity
- Focused on scalable systems and clean architecture
- Goal: Build AI-powered products and contribute to open source

ACHIEVEMENTS

- Rookie Neo Award for UI excellence
- Improved API performance by 85%
- Delivered features with zero deadline slippage
- Successfully led frontend team workflows

EDUCATION

Bachelor of Computer Science

Periyar E.V.R College, Trichy

2018 – 2021

GPA: 7.5
